COFFEE POT. THIS new Corres Por, for which a patent has been you may bell coffee in it for any length of time, without a particle of the strength or aroma escaping. One fourth less softee is required, and the full flavorof the serry retained. A large number of testimonials have been received from those who have used it. W. arte space for only one: The Oro Dougston Copens Por.—We have had in use now, for over two months, one of those much takens of coffee pots, and we find that it does, in all respects, what is claimed for it. You may boil coffee in the old flominion for any length of time you choose, and yet lose none of the delicate aroma or strength. This desirable end is attained by a simple, but ingenious, contrivance in the shape of a condenser, with double syphons, by means of which the aroma bearing ble syphons, by means of which the arona bearing vapor, which usually goes all over the house or up the chimney, is condensed and thrown back into the coffee botter, and you have its delicious flavor in the cup you bring to your lips. In all our experience of coffee drinking, we never found anything equal to what we now have daily at our morning meal. It is the perfection of coffee.—Philadelphia Eccuring Journal
